Preface **9**

0.1 Introduction 11
0.2 Devious trick number 1 (Add zero) 11
0.3 Devious trick number 2 (Multiply by 1) 12
0.4 Devious trick number 3 (Manipulate identities) 13
0.5 Devious trick number 4 (Recognize abstracted identities) . . . 13
0.6 Devious trick number 5 (subtract identities) 14
0.7 Devious trick number 6 (index gymnastics) 14
0.8 Important identities 15
0.9 Problems 15

1 Irrational Numbers and Ratios **17**

1.1 Introduction and Course Goals 17
1.2 Irrational Numbers 17
1.3 Zeno's Paradox 19
1.4 Ratios 19
1.5 Archimedes 22

2 Everything you want to know about series but were afraid to ask **27**

2.1 The geometric series 27
2.2 The (dreaded) Taylor series 28
2.3 Hyperbolic functions 30

3 Integrals and Limits **33**

3.1 Origins of the concept of integration 33
3.2 Sums of powers of integers 35
3.3 Issues with defining an integral 38

3.4 Numerical integration 38

4 Tangents and Logarithms **43**
4.1 Optimizations with constraints 43
4.2 Trigonometric tables 44
4.3 Tables of logarithms 46

5 Fundamental Theorem of Calculus and Manipulation of Integrals **51**
5.1 Fundamental theorem of calculus 51
5.2 Product Rule 52
5.3 Integration by Parts 53
5.4 Inverse Chain Rule 54
5.5 Inverse Functions 54
5.6 Examples 56

6 How to integrate **57**
6.1 Elementary examples of integration 57
6.2 Gaussian and Frullani integrals 60

7 Multivariable Integration: Cubic, Cylindrical, and Spherical Coordinates **63**
7.1 Arc Length and Area 63
7.2 Differential volume elements 66
7.3 Examples of volume and surface area integrals 67

8 The vanishing sphere and other multidimensional integrals **71**
8.1 Three-dimensional integrals 71
8.2 The vanishing sphere 72
8.3 Moments of Inertia 76

9 Feynman or Parametric Integration **79**
9.1 Powers and Gaussians 79

10 Vector-valued functions **85**
10.1 Vector fields 85
10.2 Examples of vector fields 88

11 Surface Integrals **93**
11.1 How to construct the integral of a vector on a surface 93

12 The Divergence Theorem **99**
12.1 Defining divergence 99
12.2 The divergence theorem 101

13 The Line Integral and the Curl **107**
13.1 Line Integrals 107
13.2 Curl 110

14 Stokes Theorem **115**
14.1 Defining Stokes Theorem 115
14.2 Examples of Stokes Theorem 117

15 Line Integrals and the Gradient **121**
15.1 Path Independence of the Line Integral 121
15.2 Laplace's and Poisson's Equations 123

16 Laplace's equation **127**
16.1 A harder Laplace's equation problem 127
16.2 Relaxation method 130
16.3 Directional derivatives 132

17 The Laplacian in Cylindrical and Spherical Coordinates **135**
17.1 Cylindrical Coordinates, the hard way 135
17.2 Cylindrical Coordinates, the easy way 138
17.3 Spherical Coordinates 139

18 Introduction to complex numbers **143**
18.1 Manipulations of complex numbers 143
18.2 Complex exponentials 144
18.3 Cauchy-Riemann equations 146

19 Cauchy Theorem and Introduction to Residues **149**
19.1 Contour Integrals in the Complex Plane 149
19.2 Proof of Cauchy's Theorem 153

20 The Residue theorem **155**
20.1 Calculating integrals via residues 155
20.2 Examples of the residue theorem 156

21 Gaussian Elimination **163**
21.1 Solving m linear equations in n unknowns 163
21.2 Concrete example of Gaussian elimination 164
21.3 General considerations about Gaussian elimination 166

22 Determinants **167**
22.1 Definition of a determinant 167
22.2 Properties of determinants 168

23 Inverse of a Matrix **173**

24 Vector Spaces **179**
24.1 Definition of a vector space 179
24.2 Scalar product 181
24.3 Polynomials and functions as vectors 182

25 Scalar Products and Orthonormal Bases **185**

26 Change of Bases **189**
26.1 Linear maps 189
26.2 Changing the bases of a map 190

27 Eigenvalues and Eigenvectors **195**
27.1 Main Idea 195
27.2 Some Properties from the Spectral Theorem 196
27.3 Examples 197

28 Application of Eigenvalues and Eigenvectors **201**
28.1 Landau-Zener Problem 201
28.2 Quantum tunneling 202
28.3 Oscillations 204

29 First Order Linear Differential Equations **207**
29.1 Definition and Method of Solution 207
29.2 Examples 209

30 Nonlinear first-order differential equations 213
30.1 Introduction to nonlinear differential equations 213
30.2 Type 1: Reducible to Linear 214
30.3 Type 2: Separable 214
30.4 Type 3: Reducible to separable 215
30.5 Type 4: Exact differential 217
30.6 Type 5: Reducible to exact 219

31 Applications of First-Order Differential Equations 221
31.1 Models of Air Resistance 221
31.2 Newton's Law of Cooling 224
31.3 Variable Mass (Rocket) Problem 226

32 Linear differential equations 229
32.1 Introduction 229
32.2 Basis Set of Solutions 230
32.3 The Wronskian 230
32.4 Method of variation of parameters 231
32.5 Example 233

33 Linear Differential Equations with Constant Coefficients 235
33.1 Description of the basic method 235
33.2 Examples 238

34 Method of Undetermined Coefficients 243
34.1 Introduction 243
34.2 Example 1 244
34.3 Example 2 244
34.4 Example 3 245
34.5 Example 4 246
34.6 Example 5 248

35 The Frenet-Serret Apparatus 251

36 Dirichlet's Problem and Poisson's Theorem 259

37 Fourier Series and Separation of Variables 267
37.1 Formalism 267
37.2 Examples 270

38 Applications of Poisson's Theorem **277**
